GRAND PRIX World Puzzle Federation

## Points:

1. Fillomino 6
2. Fillomino 12
3. Fillomino 17
4. Fillomino 58
5. Tapa 5
6. Tapa 8
7. Tapa 7
8. Tapa 20
9. Tapa 36
10. Spiral Galaxies 35
11. Spiral Galaxies 23
12. Spiral Galaxies 37
13. LITS 33
14. LITS 18
15. LITS 27
16. LITS 25
17. Magnets 31
18. Magnets 28
19. Magnets 29
20. Pills 25
21. Pills 54
22. Pills 40
23. Starry Road 26

TOTAL: 600

General Notes: Some of the puzzles and puzzle solutions in this round incorporate Switzerland-related themes, specifically equilateral crosses and the initials " CH " (for "Confoederatio Helvetica").

An earlier version of the instruction booklet left out an important rule for the Starrry Road puzzle. This has been corrected.

## 1-2. Fillomino [Roger Kohler] (6, 12 points)

Divide the grid along the dotted lines into regions (called polyominoes) so that no two polyominoes with the same area share an edge. Inside some cells are numbers; each number must equal the area of the polyomino it belongs to. A polyomino may contain zero, one, or more of the given numbers. (It is possible to have a "hidden" polyomino: a polyomino without any of the given numbers. "Hidden" polyominoes may have any area, including a value not present in the starting grid, such as a 6 in a puzzle with only clues numbered 1-5.)

The dots in cells are only used for entering your answers.

Answer: Enter the area of the polyomino each dot is in, reading the dots from left to right. (Ignore which row the dots are in.) Use only the last digit for two-digit numbers; e.g., use '0' for a polyomino of size 10.

Example Answer: 82523655

| 1 |  | 6 |  |  |  |  | 2 | - |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| - | 4 |  | 3 |  |  | - |  | 2 |  |
|  |  |  | - | 3 | - |  |  |  | 3 |
| 4 | 1 | 5 | 4 | $\bigcirc$ | 6 |  | - | 9 |  |
|  |  | 4 |  |  |  | 5 |  |  |  |
| 3 | $\bigcirc$ |  | 4 | 2 | 3 |  | 5 | 1 |  |
| 1 |  | 3 | 5 | 1 | 4 |  |  |  |  |
|  |  | 5 |  | 5 | 4 |  | 2 |  | 2 |
| 4 | 2 | $\bigcirc$ |  | 1 |  | 2 |  |  |  |
|  |  | 2 |  |  | 5 |  |  | 9 | $\bigcirc$ |

## 3－4．Fillomino［Roger Kohler，Fred Stalder］（17， 58 points）

Answer：Enter the area of the polyomino each dot is in，reading the dots from left to right．（Ignore which row the dots are in．）Use only the last digit for two－digit numbers；e．g．，use ＇0＇for a polyomino of size 10.

Example Answer： 82523655

| 8 |  |  |  | 1 | 4 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 2 |  | 4 |  |  |  |
|  | 2 |  |  |  | － |  | 4 |
| － |  | － | 6 |  |  | 6 | 5 |

| $\cdots$ |  | 1 | 8 |  | 4 | 8 |  |  |  | $\bigcirc$ |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  | 0 |  | 1 | 8 | 1 | 5 |  |  |  |  |
| 1 | 2 | 9 | 1 |  |  | $\bigcirc$ |  |  | 1 | 8 | 4 | 8 |

## 5-6. Tapa [Markus Roth] (5, 8 points)

Shade some empty cells black (cells with numbers cannot be shaded). All black cells connect along edges to create a single connected region. (It is permissible for the region to touch itself at a corner, but touching at a corner does not connect the region.) No $2 \times 2$ group of squares can be entirely shaded black.

Numbers in a cell indicate the lengths of contiguous black cell groups along the "ring" of (up to) 8 cells touching that cell. (If there is more than one number in a cell, then there
 must be at least one white (unshaded) cell between the black cell groups.) The numbers are given in no particular order. As a special case, if the number given in a cell is a zero (0), it means that none of the cells around that cell may be shaded black.

Answer: For each designated row, enter the length in cells of each of the shaded segments from left to right. Use only the last digit for two-digit numbers; e.g., use ' 0 ' for a segment of size 10 . If there are no black cells in the row, enter a single digit ' 0 '.

Example Answer: 212,231

5b
$5 b$

| 1 |  |  |  |  |  |  | 3 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | $3_{3}$ |  |  |  |
|  |  | 3 |  |  |  |  |  |
|  |  | 1 |  |  |  |  | 6 |
|  |  | 2 |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  | 2 |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |

|  | ${ }^{1} 5$ |  | ${ }^{1} 3$ |  |  |  |  |
|  |  |  |  |  |  |  | 2 |

$b^{-}$

## 7-8. Tapa [Markus Roth, Esther Naef] (7, 20 points)

Answer: For each designated row, enter the length in cells of each of the shaded segments from left to right. Use only the last digit for two-digit numbers; e.g., use '0'for a segment of size 10. If there are no black cells in the row, enter a single digit '0'.

Example Answer: 212,231

|  |  |  |  |  |  | 1 |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 2 |  | 0 |  | 1 |  | 5 |  | 3 |  |
|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |
| 1 | (b) |  |  |  |  |  |  |  |  |  |
| 1 |  |  |  |  |  |  |  |  |  |  |
|  |  | 2 |  | 0 |  | 1 |  | 5 |  |  |
|  |  |  |  |  |  |  |  |  |  |  |
| ${ }^{1} 1$ |  |  |  |  |  |  |  |  |  |  |
|  |  |  | 2 |  | 0 |  | 1 |  | 5 |  |
|  |  |  |  |  |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |  |  |  | 2 |

|  |  |  | 3 |  |  |  |  |  | 2 |  |

|  |  | ${ }^{1} 2$ |  |  | ${ }^{1} 2$ |  |  | ${ }^{2} 3$ |  | 3 |
|  |  |  |  |  |  |  |  |  |  |  |
|  | 3 |  |  |  | $1_{1} 1$ |  |  |  |  |  |
|  |  |  | ${ }^{1} 2$ |  |  |  | 4 | 4 |  |  |
|  |  |  |  |  | $2_{3}$ |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  | ${ }^{1} 2$ |  |  |
|  |  |  | 6 |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  | ${ }^{2} 2$ |  |  |
| 2 |  | ${ }^{1} 2$ |  | ${ }^{1} 2$ |  | 12 |  |  |  | 2 |

## 9. Tapa [Esther Naef] (36 points)

Answer: For each designated row, enter the length in cells of each of the shaded segments from left to right. Use only the last digit for two-digit numbers; e.g., use '0' for a segment of size 10 . If there are no black cells in the row, enter a single digit ${ }^{\prime} 0$ '.

Example Answer: 212,231

|  | ${ }^{1} 2$ |  |  | $1_{3}$ |  |  |  |  |  | $1_{3}$ |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  | ${ }^{2} 2$ |  |  |  |  |
|  |  | 5 |  | 2 |  |  |  | $2_{2}$ |  |  |  |
|  |  |  |  |  |  | $1_{2}$ |  |  |  | $2_{2}$ |  |
|  | 5 |  | $1_{1}$ |  |  |  |  |  |  |  |  |
|  |  |  |  |  | 6 |  |  | $2_{2}$ |  |  |  |
|  |  | 5 |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  | 5 |  |
|  |  | $2_{4}$ |  | $2_{4}$ |  | $1_{3}^{1}$ |  | $1_{1} 1^{1}$ |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  | 3 |  |  |  |  |  |  |  |  |  | 2 |

## 10. Spiral Galaxies [Esther Naef] ( 35 points)

Divide the grid along the dotted lines into regions so that every cell is part of exactly one region. Each region must be rotationally symmetric (has the same shape when rotated 180 degrees) with exactly one dot inside it, at the center of rotation. (It is permissible to have a region of size exactly one cell, as long as that cell has a dot in its center.)

The letters inside the dots are only used for entering your answers.

Answer: For each designated row, enter the matching letter for each cell from left to right. The matching letter for a cell is the letter inside the dot that is at the center of the region that contains that cell.

Example Answer: HFGGGGG,MMMMKLL

11－12．Spiral Galaxies［Carmen Günther］（23， 37 points）
Answer：For each designated row，enter the matching letter for each cell from left to right．The matching letter for a cell is the letter inside the dot that is at the center of the region that contains that cell．

Example Answer：HFGGGGG，MMMMKLL

## 13-14. LITS [Esther Naef] (33, 18 points)

Shade exactly four connected cells in each outlined region to form a tetromino, so that the following conditions are true: (1) All tetrominoes are connected into one large shape along their edges; (2) No $2 \times 2$ group of cells can be entirely shaded; (3) When two tetrominoes share an edge, they must not be of the same shape, regardless of rotations or reflections. (These rules ensure that every tetromino, based on its shape, looks like the letter "L", "l", "T", or " $S$ ". Not all four letters have to be present in the grid; for example, it is possible for your solution to not have any "I" shapes.)

Cells with an ' X ' (if given) are not part of any region.

Answer: For each designated row, enter the contents of each cell, from left to right. For each cell, its contents are the letter of the tetromino occupying that cell, or the letter ' X ' if the cell is empty.

Example Answer: LLXTXL, TTTLLL

GRAND PRIX World Puzzle Federation

15－16．LITS［Carmen Günther］（ $\mathbf{2 7}, 25$ points）
Answer：For each designated row， enter the contents of each cell，from left to right．For each cell，its contents are the letter of the tetromino occupying that cell，or the letter＇ X ＇if the cell is empty．

Example Answer：LLXTXL，TTTLLL

## 17-18. Magnets [Roger Kohler, Carmen Günther] (31, 28 points)

The grid is partitioned into regions of two square cells each (note that only region borders are drawn). Put "positive" $(+)$ and "negative" (-) symbols into some cells, at most one symbol per cell, such that each region either has two symbols or no symbols at all. Adjacent cells (even within a region) cannot contain the same symbol.

The numbers above and to the left of the grid indicate the exact number of symbols of the specified type that must be placed in each column or row, respectively. If a number is not given, there might be any number of symbols of the specified type.

Answer: For each designated row, enter its contents, using ' ${ }^{\prime}$ ' for a "positive" (+) symbol, ' N ' for a "negative" (-) symbol, and ' $x$ ' for an empty cell. Alternatively, you may use'+'for a positive symbol, '-'for a negative symbol, and ' X ' for an empty cell, but do not mix the two systems!

Example Answer: XXPXNX, PXXXPX

## 19. Magnets [Markus Roth] (29 points)

Answer: For each designated row, enter its contents, using 'P'for a "positive" (+) symbol, ' N ' for a "negative" (-) symbol, and ' X ' for an empty cell. Alternatively, you may use'+' for a positive symbol,' $'$ ' for a negative symbol, and ' $x$ ' for an empty cell, but do not mix the two systems!

Example Answer: XXPXNX, PXXXPX

## 20. Pills [Roger Kohler] (25 points)

Locate the indicated set of pills in the grid. Pills have a $1 \times 3$ or $3 \times 1$ shape and do not overlap each other. Each pill has a different "value" (number of dots inside the pill), as indicated to the right of the grid. Each number to the left and top of the grid reveals the number of dots in that row or column that are inside pills.
Answer: For each designated row, enter the pill value for each cell from left to right. (If the cell is inside a pill, enter the value of that pill; if the cell is not inside a pill, enter ' 0 '.) Use only the last digit for two-digit numbers; e.g., use ' 0 ' for a pill of value 10.

Example Answer: 90000333, 92111888

21-22. Pills [Carmen Günther, Markus Roth] (54, 40 points)
The shading in puzzle 21 is for decorative purposes only.
Answer: For each designated row, enter the pill value for each cell from left to right. (If the cell is inside a pill, enter the value of that pill; if the cell is not inside a pill, enter ' 0 '.) Use only the last digit for two-digit numbers; e.g., use ' 0 ' for a pill of value 10.

Example Answer: 90000333, 92111888

## 23. Starry Road [Fred Stalder] (26 points)

Place stars into some cells in the grid and draw a closed loop through all other cells in the grid. Each row, column, and outlined region must contain exactly one star. The loop connects the centers of cells orthogonally and goes through each outlined region exactly once (that is, it crosses the boundaries of each region exactly twice).

Stars may not be in diagonally touching cells.
Answer: For each designated row, enter its contents from left to right. Use 'S' for a cell containing a star, 'I' for a cell in which the loop goes straight, and 'L' for a cell in which the loop turns.

Example Answer: ILLSILLLL, LLIILILSI
